

# The EST ECOTOAST

## The device offers several advantages:

- ◆ for roasting soy, peas, broad beans and grains
- ◆ mill able material with 12 up to 35% moisture (for example silage from peas)
- ◆ Most efficient and compact solution worldwide

## The all-in-one principle - a 'plug 'n' play' complete system

### Filling, roasting, post cooling, emptying and industrial SPS Control

- ◆ for farms, production associations, feed producers and industry
- ◆ space -saving , even with the industry system
- ◆ system types ranging from 100 to 1000kg per hour
- ◆ modular construction up to 10.000 kg per hour with one control panel
- ◆ easy to install, easy and comfortable operation with touch screen – industrial control panel
- ◆ optimized quality: Gentle roasting through aerohydrothermic process (patented).
- ◆ unique: temperature, processing volume and air condition adjustable .
- ◆ low Temperature processing to preserve valuable ingredients of the seed and ensure best protein digestibility.
- ◆ no moving parts besides the rotary valve and fan
- ◆ high energy efficiency and intelligent heat usage
- ◆ manageable and easily calculable cost when purchasing
- ◆ low operating costs and low personnel expenses
- ◆ low maintenance costs and low service expenses
- ◆ low wear and tear, as well as spare part costs
